NON-DRAIN Valve

Anti-drain valves for drip lines. Prevents emptying of secondary and main pipes after closing the system, improves irrigation uniformity and reduces filling time. Can reinforce drip lines and button drippers on steep slopes. Installation at the beginning of the drip laterals: maintains opening and closing synchronization along the pipe.

MATERIAL CHARACTERISTICS

Outlet / Inlet: Polypropylene **PP**

Body: Highly durable technical plastic

Sleeve, bearing and cover: Reinforced plastic

OPERATING CHARACTERISTICS

Recommended working pressure: 1,4–4 bar

Opening pressure: 14 m

Closing pressure: 6 m

Connections: 1/2" female BSP thread, 16mm serrated connection
